GREENLAND’S DELTAS RECORD CHANGES IN ICE MELT
22 | CREEPING DANGER: Landslide Threatens Peruvian Village, Especially When the Earth Quakes
A massive landslide has been encroaching on the village of Maca, Peru, since the 1980s. Today, it provides geologists with a laboratory to study slow-moving landslides, especially how they react to rainfall and earthquakes. | Jane Palmer

32 | GREENLAND’S GROWING DELTAS: Combining Historical and Modern Imagery to Decode Change in a Telltale Arctic Landscape
Greenland’s 1.7-million-square-kilometer ice sheet is shrinking. But how much meltwater and sediment drains from the ice sheet through rivers? Researchers are studying the island’s deltas to find out, and are getting help from some long-forgotten aerial photos taken by the Danish Air Force in the 1930s. | Irina Overeem

40 | TRAVELS IN GEOLOGY: Corsica: A Fusion of Cultures on the Mediterranean’s Most Mountainous Isle
The rugged topography of the island of Corsica, off the coasts of France and Italy, is a blend of rocks of very different ages and origins thrust together during one of Earth’s great tectonic upheavals. | Terri Cook

64 GEOLOGIC COLUMN: PIE ON PI DAY, AND EINSTEIN’S LESSER-KNOWN LEGACY
March 14 is the birthday of Albert Einstein and also Pi Day, which celebrates the mathematical constant 3.14 that features in some of the physicist’s famous equations. | John Copeland
